

AFEX

Mass Transit

Fire Suppression Systems

AFEX systems set the standards for vehicular fire protection in the most demanding industries.

AFEX is a single product company that has specialized in vehicular fire suppression systems for more than 30 years. AFEX systems protect equipment operating in the most abusive industries whether it be in surface and underground mining, timber harvesting and processing, sanitary landfills, or public transit.

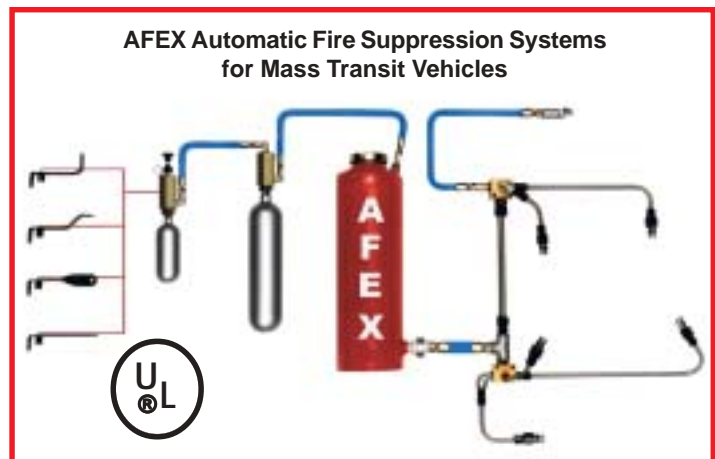

After conducting extensive market research, we have determined that the mass transit bus market has lacked a **reliable** fire suppression system that is **easy to maintain** and is backed by **factory support** service.

Fact is, AFEX is in the market. In all demanding industries for mobile vehicles, AFEX is the leading manufacturer of high quality vehicular fire suppression systems. *We will exceed your fire protection specifications as the named supplier or an "approved equal."*

Don't Just Spec Any System

AFEX –The Vehicular Fire Protection Specialist

OVER 30 YEARS OF EXPERIENCE

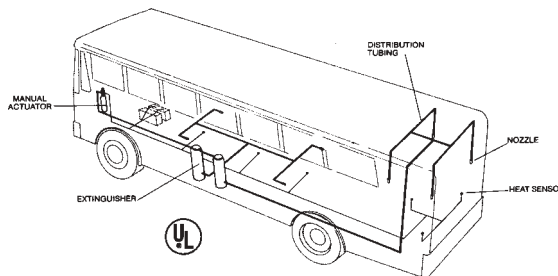

Our thirty-plus years of discovery, innovation, manufacturing and testing of fire suppression systems designed exclusively for mobile equipment ensures that your equipment is protected with a reliable and proven system. AFEX can customize, install, and guarantee a fire suppression system that works. This dedication to a narrowly focused vision has produced a product that is as tough as the equipment it is designed to protect.

LOW MAINTENANCE

We keep it simple and we're proud of it! Where ease and economy of service is critical, the AFEX system is a low maintenance side cartridge activated system. Unlike stored pressure extinguishers, AFEX system recharges are simple and can be performed on location. **AFEX systems are installed, serviced, and recharged with standard tools**, eliminating the need for special equipment.

PURPOSE BUILT PRODUCT

At AFEX, we have one philosophy, one technology and one product. Each component is designed or selected with one purpose in mind — to build the most dependable vehicular fire suppression system. Our simple design facilitates the use of gas leak detection, engine shutdown, and other special features without deterring the operation of the system or the vehicle. The AFEX fire suppression system is simple, rugged, dependable, and virtually accidental discharge-proof.

UL APPROVED

The AFEX Vehicular Fire Suppression System has been tested and approved by Underwriters Laboratories for use on mobile equipment. AFEX is the only manufacturer to have their system listed by UL, the most widely recognized independent testing laboratory.

HIGH QUALITY STANDARDS

AFEX operates a documented quality control program. Incorporating the requirements of our UL listing, ISO 9000 standards, and the best features of other QC programs we could find, AFEX holds its products to the industry's highest manufacturing standards. A quarterly inspection and auditing program ensures that the system is working and kept up to date. The unequaled satisfaction of our customers is the end product of our quality program.
