FIRE PROTECTION FOR UNDERGROUND MINING EQUIPMENT.

To protect their capital equipment, mine operators want a fire suppression system that is effective and automatic. Since a down machine can cost thousands of dollars a day in lost production, they want a system that is low maintenance and easily serviced.

AFEX knows the mining industry and understands the demands of your operation. Our fire suppression systems are purpose built to withstand the everyday abuse your machines experience. They are rugged, reliable, and effective. In the event of a fire the system discharges automatically, saving valuable seconds crucial to limiting the damage to your machine.

AFEX supplies many of the largest mines in North and South America with our reliable, low maintenance, fire suppression systems. The systems are commonly installed on drills, load haul dump loaders, and underground mining trucks. They are available in many sizes and configurations to meet your needs.

If you are serious about protecting your equipment against fires, then you can rely on AFEX, as a specialist, to offer you the best solution.
A vehicle fire suppression system is not a finished product until it is installed. Therefore, proper installation and maintenance are crucial to ensure long-term reliability and effectiveness of the system.

AFEX knows heavy equipment and the hazards that put it at risk. AFEX distributors share the same special knowledge required to effectively protect heavy equipment against fire risks. Unlike our competitors, all AFEX distributors are experienced with vehicle fire suppression systems and heavy equipment.

When choosing a vehicle fire suppression system, choose AFEX for the quality of design and choose AFEX distributors for the quality and reliability of their service.
